SUMMARY

Agentic AI Engineer and Backend Developer specializing in autonomous multi-agent workflows and event-driven architectures. Proven experience architecting enterprise-grade GenAI solutions using FastAPI and Llama 3.2 Vision. Published open-source contributor (PyPI) with a strong track record in full-cycle deployment of client-facing AI platforms, bridging LLM orchestration with resilient, scalable APIs.

TECHNICAL SKILLS

GenAI & LLMs: Multi-Agent Systems, RAG, OpenClaw, Llama 3.2 Vision, Gemini 1.5/2.5 Pro, Veo, Prompt Engineering.
Backend & DevOps: Python (AsyncIO), FastAPI, SQLAlchemy, Stripe API, PostgreSQL, Docker, n8n, GCP, PyPI, Git.
Libraries & Tools: LangChain, `continuity-stitch` (Author), FFmpeg, PyTorch, NumPy, Pandas, SpeechRecognition.

EXPERIENCE

Creative Lipi (Vendor for IndiaMART) Noida, UP
Product Design Engineer Jan 2025 – Oct 2025

- Engineered prompt engineering workflows using Gemini to automate the generation of SEO-optimized content, reducing manual processing effort by 40%.
- Managed data validation protocols for 200+ product catalogs, ensuring strict adherence to schema specifications and logical data structuring.
- Executed system integration testing (SIT) as a Technical Beta Tester for client-facing integration tools, logging critical defects to ensure 99% system uptime.
- Optimized organic visibility for 27+ monthly clients via the implementation of strategic keyword logic.

FEATURED PROJECTS

Continuity SaaS & `continuity-stitch` | *FastAPI, Veo* | [GitHub](#) | [Live Space](#)

- Architected an autonomous video post-production platform using FastAPI, Gemini 2.0 Flash, and Google Veo 3.1 to dynamically synthesize cinematic transition bridges between disparate clips.
- Authored and published `continuity-stitch` (PyPI), a core Python library utilizing FFmpeg for algorithmic video concatenation, automatic resolution scaling, and frame rate normalization.
- Engineered a resilient billing architecture utilizing Stripe Webhooks and SQLAlchemy row-level locking, ensuring atomic credit deductions and zero race conditions under high-concurrency.
- Containerized the application using Docker and deployed it on Hugging Face Spaces with robust asynchronous background task management for heavy video rendering.

Niyanta (Autonomous OpenClaw Agent) | *OpenClaw, Multimodal LLMs, GCP*

- Deployed an always-on personal AI agent using the open-source OpenClaw framework hosted on a secure GCP instance.
- Integrated directly with Telegram and terminal access, enabling the autonomous execution of system workflows, file management, and shell commands via LLM reasoning.

MerchFlow AI | *Llama 3.2 Vision, Groq, n8n* | [GitHub](#) | [Live Space](#)

- Designed a sequential multi-agent system (Visual, Memory, Writer agents) to automate the conversion of unstructured product images into SEO-optimized e-commerce listings.
- Integrated Llama 3.2 Vision via Groq Cloud for ultra-low latency inference, deploying via Docker on Hugging Face.
- Configured automated webhook pipelines using n8n for seamless data transfer and downstream application integration.

House of Nutrition Online Platform | *Client Project, Web Deployment, Gemini Vision*

- Developed a scalable digital storefront to transition an established offline retail business into an e-commerce distributor.
- Leveraged Gemini Vision AI to autonomously extract product attributes and generate dynamic marketing assets, drastically streamlining manual catalog data structures.

EDUCATION

ABESIT (AKTU) Ghaziabad, UP
B.Tech in Computer Science and Artificial Intelligence 2021 – 2024

Lovely Professional University Punjab
Diploma in Computer Science and Engineering 2018 – 2021

CERTIFICATIONS

Microsoft Learn Challenge: Create agents in Copilot Studio (Jan 2025) | **Udemy:** Complete Flutter Development (Oct 2024)
Google/Coursera: Technical Support Fundamentals (Jan 2020)
